

# ABC SEAMLESS STEEL SIDING

*"The World's Largest Seamless Siding Company!"*

*We've produced enough  
seamless steel to circle  
the world three times. . .  
imagine what we will do  
for your home.*

*The Siding Without  
the QUACKS!*

# WHY ABC SEAMLESS

Today's housing market demands conservation of our environment, so the products you put on your home should be strong, weather proof, last as long as possible and reduce your energy costs. Even better would be a product that is environmentally friendly and gives you free time for the best things that life has to offer.

ABC Seamless, The World's Largest Seamless Siding Company, is *the original* seamless siding company. We recognized when we first started siding homes that seamless steel was a superior siding product. Others have tried to imitate us, but we continue to innovate the industry. We are constantly improving our installation methods and expanding our product lines to bring you the seamless, worry and maintenance-free lifestyle that our customers enjoy.

## WHICH WOULD YOU CHOOSE?

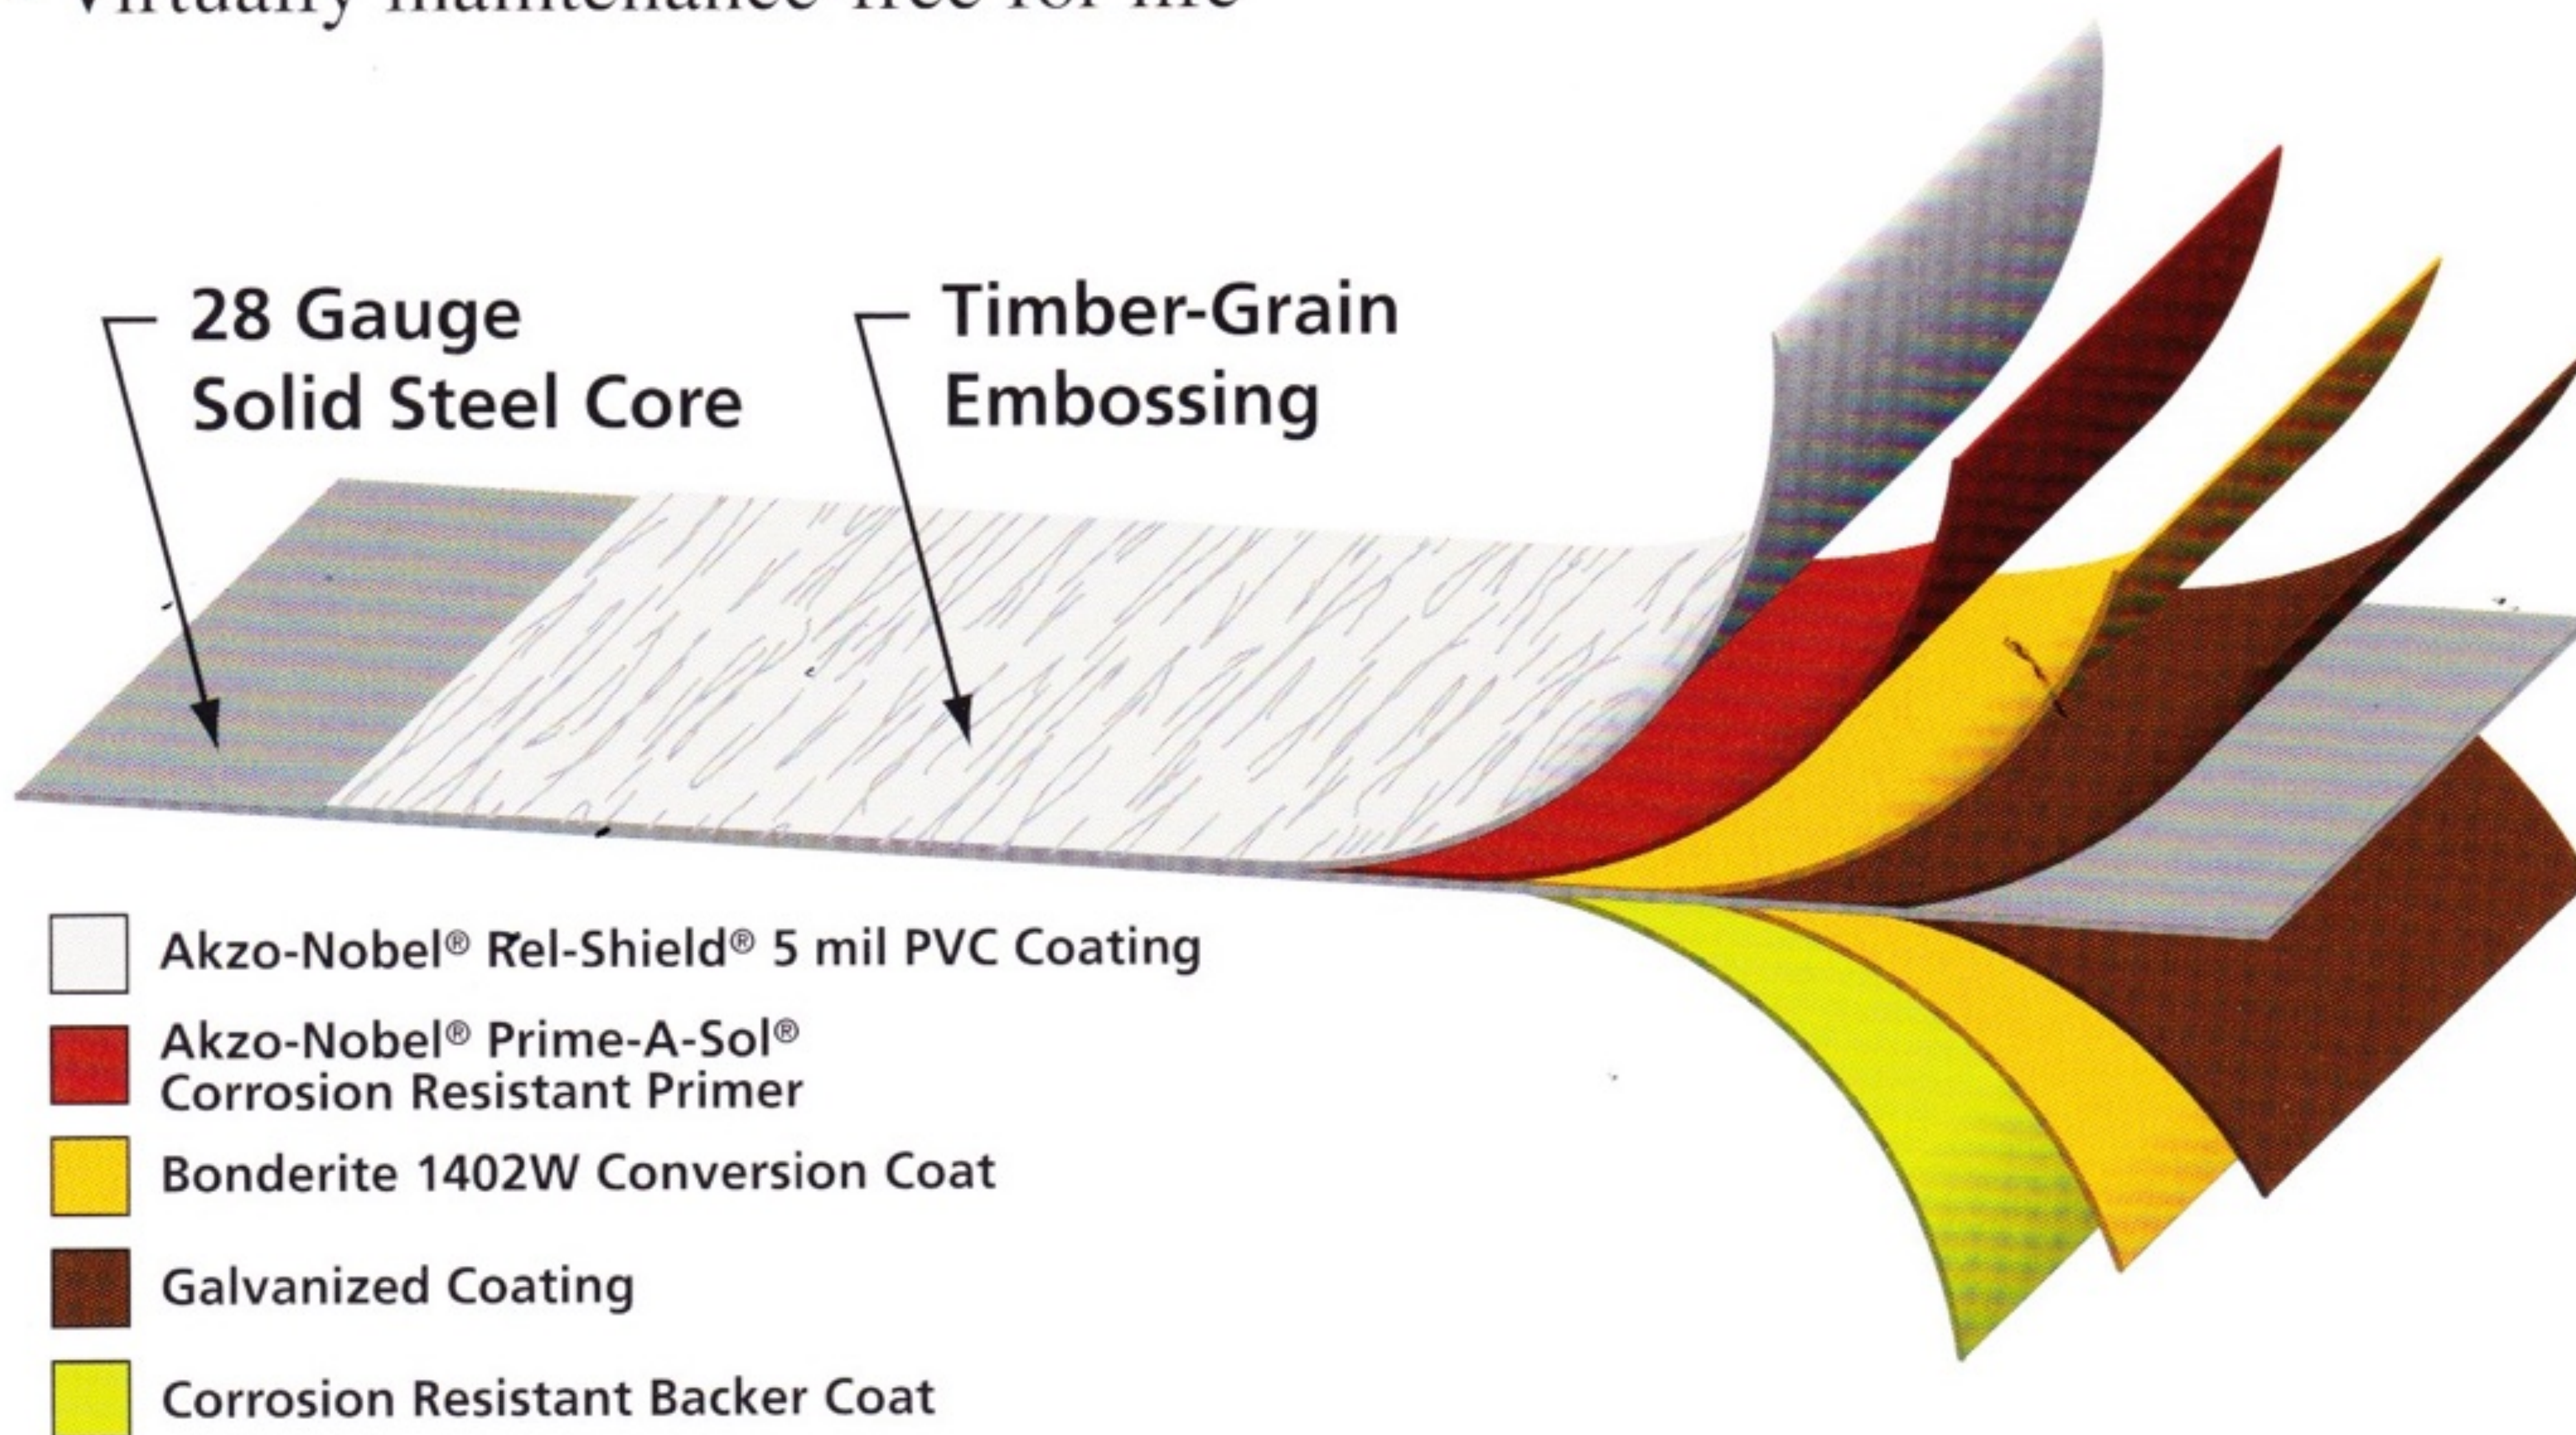

Others try to hide laps and gaps

ABC Seamless steel siding eliminates them

## WHY CHOOSE SEAMLESS STEEL

- Each panel of siding is custom fit to the exact dimensions of your home
- There are no cracks, seams, or splices like other siding products
- Reduce air and moisture infiltration
- Create a more weatherproof house
- Won't blow off, buckle or melt like other products
- Virtually maintenance-free for life

“We were certainly very happy. We recommend ABC Seamless. It's been about 18 years since we had it put on and haven't had to do anything at all to it.” - *Moorhead, MN*

“We feel as though we have been given a brand new home without the hassle of moving our furniture! Thank you!” - *Mr. & Mrs. Foltz, Dover OH*

“The heating bills definitely went down. The house was not so drafty.” - *Ed & Joyce, Barnesville, MN*

# ENVIRONMENTALLY RESPONSIBLE

The benefits of seamless steel siding continue beyond the walls of your home. We waste less material than other products because every panel of ABC Seamless siding is manufactured on-site to the precise measurements of your home.

Our factory on wheels arrives at your home filled with large coils of steel in your chosen color and style, not filled with box after cardboard box of 12-foot pieces.

Above: We go to any length to protect your home.

# ENERGY CONSERVATION

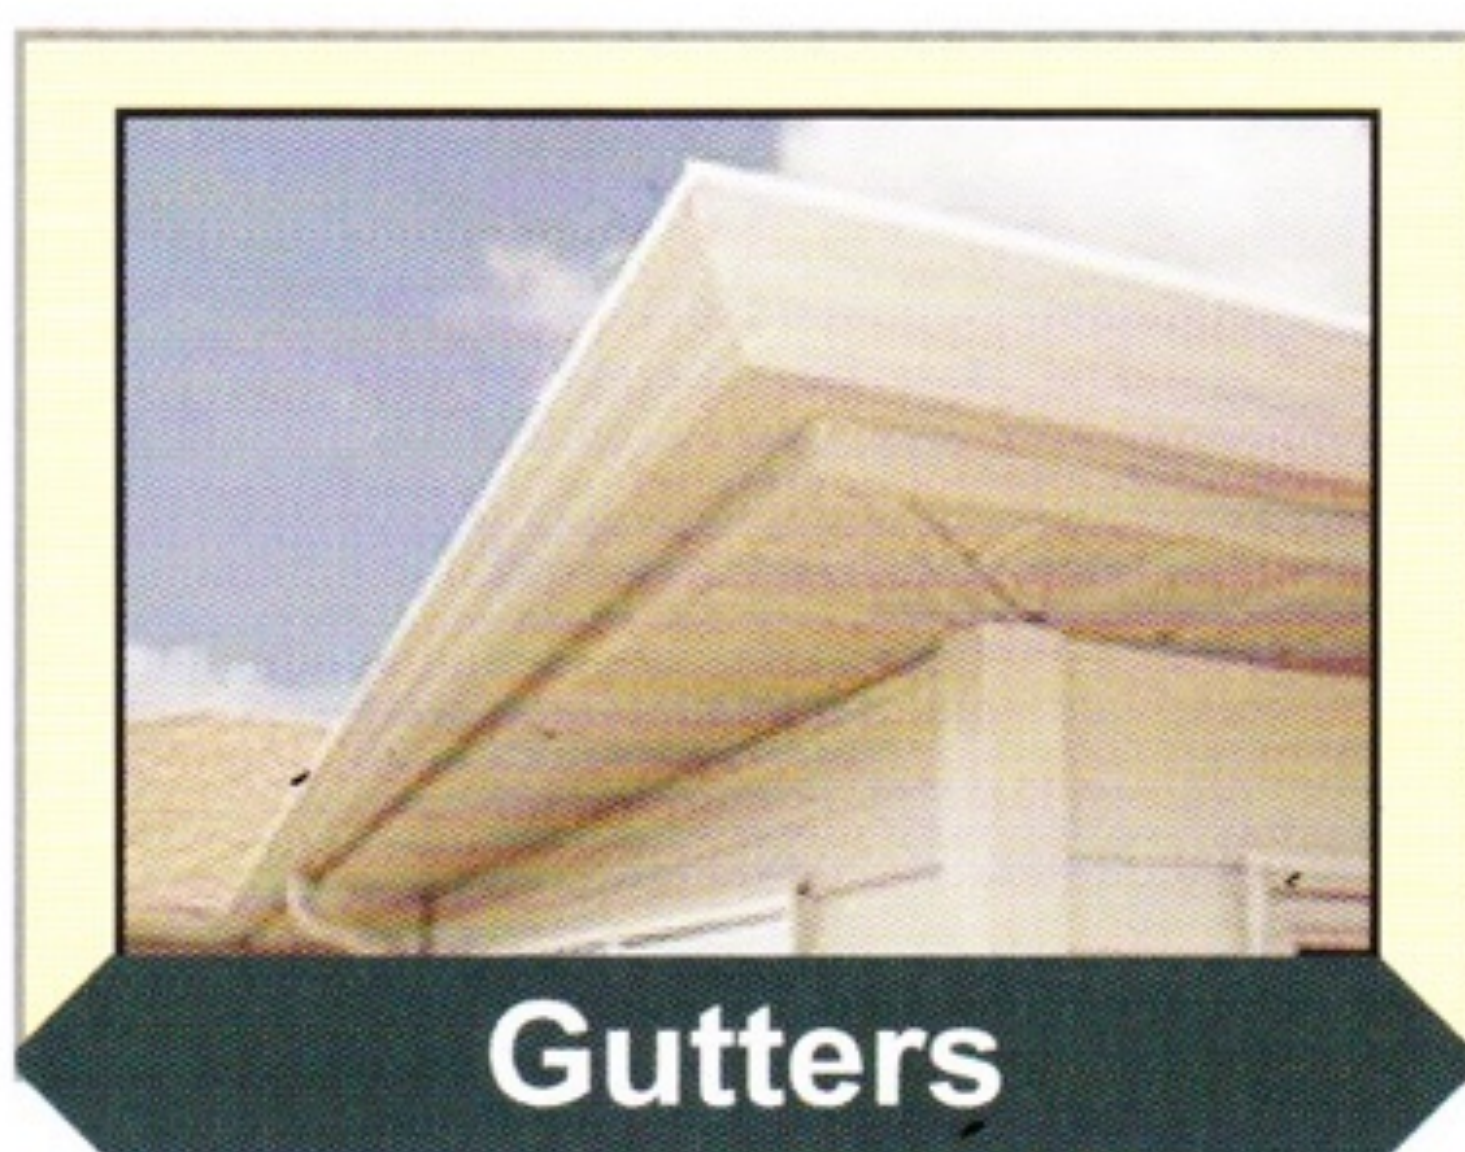

Energy-efficiency is a primary factor driving home-buying and remodeling decisions. Seamless steel siding looks great and is the beginning of a long road of savings.

The Department of Energy says nearly 33-percent of air leakage in homes comes from the walls, floors and ceilings. It also says that adding insulation to wall exteriors, could cut homeowner's heating and cooling bills in half.

ABC Seamless Steel Siding, installed with our insulation, has earned the Energy Star of approval from the United States Department of Energy. This is a tremendous accomplishment that we take seriously. Together, our seamless steel siding and insulation promote energy efficiency and lasting durability to homes and businesses.

# TOTAL FLEXIBILITY

With ABC Seamless products, it's easy to give your home a complete maintenance-free makeover. We don't discontinue colors or styles, so future additions will be able to share the same beautiful look as your project today. All siding, gutters, soffit, fascia, and trim colors are interchangeable.

# ABC Seamless Steel Siding Beats Other Siding Hands Down

## Hazards of other products:

### ! VINYL SIDING:

Vinyl siding begins to distort at 156°F. Forget to move the grill from the side of the house and your siding will warp. Melting from heat exposure or reflected heat from nearby windows are not covered under vinyl siding warranties.

\* Melting vinyl releases dangerous gasses into the air. These gasses are a severe health hazard if inhaled.

### ! FIBER CEMENT:

† The dust created from drilling, cutting, and grinding during installation of fiber cement products contain silica particles that are small enough to be inhaled and deposited in the deepest part of the lung. Silica dust causes scar tissue to develop in the lungs which may be permanent and may cause silicosis, a disabling lung disease, and cancer. There is no cure for silicosis.
